

OZOJIDEOFOR CHIBUEZE MANASSEH OZ

Full-Stack Software Engineer

Moshalashi, Tunga, Minna, Niger State | 08128680485 | ozpetermanasseh@gmail.com

Portfolio: ozpetermanasseh.vercel.app | GitHub: github.com/PeterManassehOz | LinkedIn: linkedin.com/in/chibueze-ozojideofor

React • TypeScript • Next.js • Node.js • NestJS • MongoDB • PostgreSQL

Full-stack software engineer who has taken five-plus production platforms from Figma design to deployment, including a state-government logistics system now used by 10,000+ farmers and a multilingual regulatory platform live across 100+ banks in three countries. Skilled in React, TypeScript, Next.js, Node.js, NestJS, MongoDB and PostgreSQL, with a track record of building enterprise-grade APIs, internationalized interfaces, and business automation tools that measurably cut manual work. Engineering-trained, self-directed into software development, and focused on writing clean, maintainable code around real business problems.

WORK EXPERIENCE

Software Engineer

Jul 2025 – Present

OPEX Consulting Ltd — hired directly out of the Peace House internship below

- Designed and built enterprise logistics workflows across the Admin, Logistics, and Farmer portals of the PLACOM platform, a system commissioned by a Nigerian state government now used by 10,000+ registered farmers, hundreds of admin users, and multiple logistics companies.
- Built the backend services and business logic for RegWatch, a multilingual regulatory intelligence platform now deployed across 100+ banks in Nigeria, with additional live deployments in Liberia and the UK ahead of a planned Africa-wide rollout.
- Developed backend APIs and business logic for the Imo-Ohuru Farmer Platform (Diopalm) using NestJS and MongoDB, supporting an organization-run program serving hundreds of palm tree farmers.
- Implemented multilingual (i18n) support across the RegWatch platform using React, TypeScript, and react-i18next, and converted Figma designs into production-ready, reusable React components.
- Integrated RESTful APIs between frontend and backend systems, and worked directly with product managers, designers, and fellow engineers within Agile sprints, including code reviews, debugging, and feature delivery.

Software Developer (Intern)

2024 – 2025

Peace House ICT & Tech Department — one-year internship; led to direct hire at OPEX Consulting Ltd

- Designed, built, and deployed a Conference Room Booking System and an Online Bookstore Platform to support internal organizational operations.
- Collaborated with stakeholders to translate business requirements into working software solutions, and maintained and enhanced existing systems to improve usability and performance.
- Used personal time during the internship to design and ship three additional self-initiated platforms (detailed under Personal Projects below), building the portfolio that led directly to the OPEX offer.

Junior Staff

2023 – 2024

Ministry of Information and Strategy

- Assisted in ICT operations and administrative technology support, and collaborated with telecommunications personnel during network infrastructure deployment.
- Supported server and LAN configuration activities.

Mathematics Instructor

2022

Incubators Group of Schools

- Taught Mathematics using practical, problem-solving methods and encouraged project-based learning to strengthen students' analytical thinking.

PERSONAL PROJECTS

Academic Result Computation System (Excel VBA)

- Automated student result computation for an entire school of hundreds of teachers, cutting a process that previously took days to weeks down to a few hours.
- Generated printable report cards, implemented automated class ranking, and built an analytics dashboard for performance tracking.

Inter-State Online Bookstore Platform

- Built authentication, product catalog, and search functionality for a platform used across multiple states, with book availability tailored to each user's state of access.

Bible Study Platform

- Built Bible study features, real-time chat, and a responsive interface serving hundreds of users.

EDUCATION

Higher National Diploma, Telecommunication Engineering — Federal Polytechnic, Oke (2019–2021)

National Diploma, Electrical Electronics Engineering — Federal Polytechnic, Oke (2016–2018)

Self-transitioned from an engineering academic background into full-stack software development in 2023, learning through self-directed study (YouTube-based courses) and AI-assisted practice, ahead of the Peace House internship above.

SKILLS

Languages & Frameworks: JavaScript, TypeScript, React, Next.js, Node.js, NestJS, Express.js, Vue

Databases & APIs: MongoDB, Mongoose, PostgreSQL, RESTful APIs, JWT Authentication, Redis, Bull Queue

Frontend & UI: Tailwind CSS, React Router, React Query, React Hook Form, i18next, Figma-to-code

Tools & Infrastructure: Git, GitHub, Postman, VS Code, Cloudinary, AWS S3, Google Cloud Storage

Languages Spoken: Igbo, Yoruba, English

Working Style: Cross-functional collaboration, Agile/Sprint delivery, Time management, Clear written communication

KEY ACHIEVEMENTS

- Shipped a state-government logistics platform (PLACOM) now used by 10,000+ farmers, hundreds of admins, and multiple logistics companies.
- Delivered core backend and multilingual infrastructure for RegWatch, a regulatory platform live across 100+ banks in Nigeria, Liberia, and the UK.
- Automated a school's entire result-computation process with Excel VBA, cutting a days-to-weeks manual task down to a few hours for hundreds of teachers.
- Took five-plus platforms end-to-end from Figma design through to production deployment, spanning frontend, backend, and API integration.
